KP2000 SERIES

DIGITAL PROGRAM CONTROLLER

The KP2000 series is a 96x96mm digital program controller with the indicating accuracy of ±0.1%, the control cycle of approximately 0.1 seconds and maximum 30 program patterns (maximum 19 steps/pattern).

The configuration of highly functional system is enabled by various options including 2 transmission signal outputs, 2 communications ports and arbitrarily-allocation of digital inputs/outputs.

■ FEATURES

● Large easy-to-view 5-digit display

Process value (PV) and set value (SV) are displayed by large easy-to-view 5-digit display indicators. The resolution of 0.1°C is enabled for more than 1000°C.

Outstanding controllability

Two types of PID algorithms, the position-type PID algorithm and the speed-type PID algorithm, have been installed. You can select the optimum PID algorithm for an object controlled.

Program pattern

Settings of maximum 19 steps per pattern and maximum 30 sets of patterns are enabled. Repeating of a whole program pattern, linking of program patterns and repeating of a specific step in a program pattern are enabled, too.

Versatile control functions provided

Versatile control functions, such as the automatic PID system, which executes control by PID parameters preset at every SV sections, and selection of the 2-output control system from PID system and split system for 2-output types, are available.

Communications 2-port type provided

Models with 2 communications ports are available. In addition, speeding up and highly-functionalization of communications have been realized. For example, you can use 1 port for high order communications with a personal computer and another port for the communications remote (digital remote) function. The communications protocol can be arbitrarily selected from [MODBUS] and [PRIVATE].

●Transmission signal 2-output type provided

2 types of transmission signal output, the high-precision type (0.1% of full scale) and the general type (0.3% of full scale), are available. Transmission signal 2-output types with these 2 transmission signal outputs and models with transmitter power supply are available.

●DI/DO arbitrarily-allocation

When the digital input (DI) or the digital output (DO) is added, arbitrarily-allocation for assigning functions to those DI/DO's is enabled. It is the function enabling allocations such as [External drive input] to DI1 to DI3 and [Pattern selecting input] to DI4 to DI6.

Output up to 8 points of time signals enabled

With the 8 digital outputs type added, up to 8 points of time signals can be outputted by allocating time signal TS1 to TS8.

Heater disconnection alarm

The heater disconnection alarm can be added to ON-OFF pulse output types or SSR drive pulse types only.

By connecting the designated CT externally, the current value of heater is measured and can be indicated on the operation screen.

●Conforming to international safety standards and European directives (CE)

The controller is conformity with European directives (CE), and is UL and c-UL approved.

●Conforming to RoHS

The controller is an environmental consideration product which does not contain directed hazardous substances such as lead, etc.

Option

The control mode (Output No.1) can be selected from 1,3,5 or 6 only.

Only available to the unit having output No.1 (or No.2) of 1 or 5. Multiple selection in different option zone is not available.

In case of pulse type in both Output No.1 and No.2, output No.1 makes alarm judgement. It can be selected when the 2nd zone is 1, 2, 3 or 4 only.

D: 24VAC/24VDC

*4 It can be selected when the 2nd zone is 0, 1, 2, 3, 4, J, K or L only.

Note:For options common to 1st zone, 2nd zone and 3rd zone, assign them in the order of [9], [P] and [M] from 3rd zone first.

Function keys

13. FNC key

With the operation screen displayed, pressing it puts the controller in the operation key mode. With the settings screen displayed, pressing it puts the controller in the setting key mode and it operates to move the cursor backwards.

RUN key

In the operation key mode, it operates as RUN key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for switching between the operation screen and the mode screen of Mode 0, or for switching from the settings screen to the mode screen.

In the operation key mode, it operates as STOP key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used to switch the settings screen.

16. ADV (Advance) key

In the operation key mode, it operates as ADV key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for moving the cursor and for selecting a parameter.

17. RESET key

In the operation key mode, it operates as RESET key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for changing a setting value (or selecting a parameter) in descending order.

18. PTN (Pattern) key

In the operation key mode, it operates as PTN key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for changing a setting value (or selecting a parameter) in ascending order.

19. A/M (Auto/Manual) key

In the operation key mode, it operates as A/M key. With the settings screen displayed, pressing it puts the controller in the setting key mode and it is used for registering the settings.
